

5 Meter HF Mobile Whip Antenna

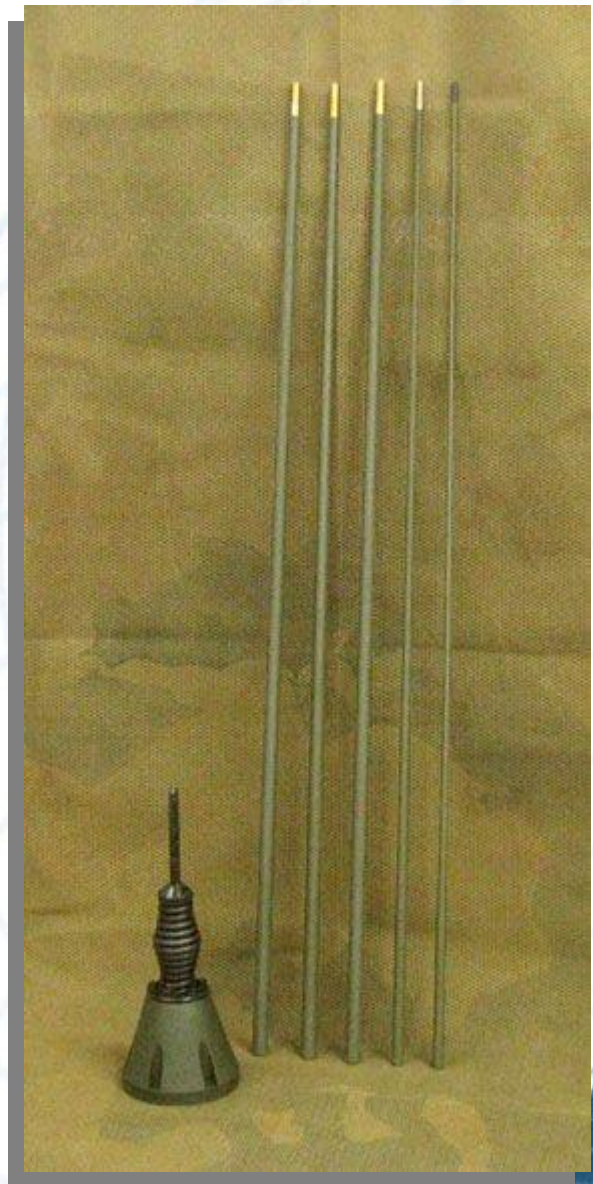

The HF5M is 5M sectional whip antenna for tactical mobile and semi-static HF communications.

The radiating element, protected in a flexible composite sleeve, is impact resistant and robust.

The flexible spring base allows the whip antenna to be tied down horizontally, using the supplied Tie Down Clip, for NVIS (Near Vertical Incidence Skywave) applications.

Sections may be added or removed to provide a suitable length for all vehicles/applications.

Mounting base available in either 4 or 6 hole. Integrated GPS antenna available as option.
